Flash SMS - new SMS format

Citibank has launched a new SMS format - **Flash SMS*** for alerts used by Citibank Online. For security reasons, the most important functions of Citibank Online are protected by one-time password which is valid only for the current session. The new format allows you to simplify the usage of one-time passwords:

- flash SMS pops up immediately and you do not have to waste time on viewing SMS.
- flash sms is deleted automatically and it does not overflow memory of the phone and SIM card.
- some models have option “save” flash sms in accordance with your desire.

If mobile phone does not support flash format you would receive a standard sms message.

* **Flash SMS** – is a SMS message that is displayed immediately on the screen of your mobile phone supporting such option.
